It is very common for most offices to offer drinking water for their employees, be it for coffee, tea or drinking water.

How much more convenient if this water was pre-boiled, or pre-cooled for immediate consumption!

Our **CHARM CW 929** 5 stage series with booster pump produces water by reverse osmosis and hold a constant volume of hot, cold or room temperature water. It also has a reboil function that gives you extra hot water for use with tea.

It only needs a connection to mains water, a means of reject water disposal and a three pin plug and you are up and running within an hour from installation

SPECIFICATIONS

Model :	CHARM CW929P 180 l/day average ; 320L/day (XRO100)
Includes:	Booster pump Filmtec membrane 5 stage filtration 8 L tank 3 installed Faucets
Control:	Solenoid valve to cut off water supply High pressure switch cut-out Low pressure cut-out to stop RO when no water in mains
